PROJECTS

Happy Little Galaxies

ETL Partner Project Application Development

2 Weeks

- Developed a Bob Ross-inspired space art web app with secure user login and interactive gallery
- Managed data with PostgreSQL and Firebase; built API with Node.js/Express; designed frontend with React
- Optimized data flow with pagination and caching, ensuring smooth user experience

Technologies: React, Node.js, Express, PostgreSQL, Firebase, Notion, Slack

Webpack Project

Webpack Configuration & Optimization

1 week

- Designed and implemented modular Webpack configuration to streamline the build process for a React-based web application
- Optimized production builds by configuring code splitting, image optimization, and minification
- Set up a Webpack development server with hot reloading for efficient development workflow

Technologies: Webpack, JavaScript, HTML, CSS, Node.js, npm

React Intro Project

Basic React Application Development

1 Week

- Developed a simple JavaScript application using React, gaining foundational skills in JSX, components, and debugging tools
- Built reusable components and managed state within the application
- Utilized Enzyme for component testing and ensured application functionality

Technologies: React, JavaScript, HTML, CSS, Create-React-App, Enzyme

Spotify UX Redesign-Designer Language

Designed and validated a Spotify desktop app feature to enhance music discovery, incorporating user research, Figma prototyping, and usability testing

2 Weeks

Article can be found on my LinkedIn

- Identified music discovery pain points by analyzing user personas and journey maps
- Conducted ideation sessions, leading to the selection of a top design solution
- Created high-fidelity mockups and an interactive Figma prototype

Technologies: Figma, User Research Methodologies
